

# Minimise risk = MAXIMISE FLEET SAFETY!

*Handistep*

## Handistep stand at the CV Show 2005!

SINCE the launch of Handistep's bespoke safety rear step systems designed for light commercial van models some three years ago, steady progress has been made.

There have been more and more fleet customers taking into account the features and benefits of this unique product and how it addresses the health and safety issues surrounding operatives that load equipment onto the roof of their vehicles and gain entry to the van in mobile workshop vehicles.

Once again, Handistep was exhibited at the recent CV Show with even more success than last year and despite having a larger stand in the middle of the LCV OEM's ran out of space with potential customers eager to gain information about the product.

The company has a dedicated sales/engineering consultant, who works closely with OEMs and customers including The Police Federation & BT Fleet to develop bespoke rear van step configurations OEM Tested & Approved-TUV/ELVD Compliant - Optional Reverse Sensor Kits and Spares for Repairs.

Handistep was the first company to exhibit the NEW BT Fleet customer support vehicle

on the Handistep stand 10-409, fitted with new products as shown in the photograph (left) from CV Show.

Handistep customers both at OEM level and aftermarket continue to grow and this years CV Show gave prospective new customers the opportunity to try out the steps which were fitted onto different vans exhibited on their stand.

Certainly the sign off 'Minimise Risk- MAXIMISE SAFETY' created huge interest in the product and the Handistep team received the biggest volume of enquiries they have ever had.

For the people who did not make it to the CV Show this year, feel free to email or contact them with your enquiry.

After all, everyone deserves to be safe...make sure it's you by fitting Handistep.
